OBJECTIVE

01 // GOAL

I am an IT student focused on becoming a **Unity game developer**. I enjoy building gameplay systems, mobile-first UI, and multiplayer backend features for games. I am looking for a **Game Developer Internship** or **Fresher Unity Developer** opportunity where I can keep learning while contributing to real game projects.

TECHNICAL SKILLS

02 // STACK

GAME DEVELOPMENT

Unity | C# | Gameplay Programming | Turn-based Systems | Mobile UI | Game Economy Basics

BACKEND FOR GAMES

ASP.NET Core | SignalR | REST API | SQL Server | JWT Auth | Docker basics

TOOLS & PIPELINE

Git | Blender | Krita | Photoshop | VS CODE

CURRENTLY LEARNING

VFX for games | Spine 2D | Game Design | Casual prototyping | Multiplayer testing flow

EDUCATION

03 // EDU

Portfolio Build Pr

TYPE & PLATFORM: Online board game / Monopoly-like • Android first, PC build available/planned

TECH STACK: Unity | C# | ASP.NET Core | SignalR | SQL Server | JWT Auth

RESPONSIBILITIES / WHAT I BUILT

- **Turn-Based Board Game Flow:** Engineered core loop including dice rolling, boa tile action resolution, property ownership, tiered rent calculations, property upgrades, debt/payment, and bankruptcy elimination systems.
- **Multiplayer Room & Lobby Flow:** Implemented real-time room creation, match-joining lobby state machine, and in-game turn synchronizations via SignalR.
- **Game Backend & API Integration:** Integrated ASP.NET Core REST APIs for JWT-based player authentication, cloud profile storage, game economy, virtual shop, daily login rewards, and match session records.
- **Server-Authoritative Validation:** Designed server-checked turn actions and match state rules to minimize client-side cheating and prevent state desynchronization between players.
- **Mobile-First UI Architecture:** Built responsive, responsive UI screens for home, shop, top-up, quest rewards, room lobbies, and interactive in-match gameplay HUDs.
- **Localization & System Feedback:** Integrated English/Vietnamese (EN/VI) dynamic localization system across UI texts, action cards, system dialogs, and gameplay feedback toasts.
- **Build & Release Pipelines:** Configured Android APK build distribution and packaged Windows PC desktop builds with an Inno Setup installer workflow.

TECHNICAL HIGHLIGHTS

DETERMINISTIC TURN STATE MACHINE

Structured lifecycle: RollDice → MovePawn → TileAction → Buy/Upgrade → PayRent → SettleDebt → PassTurn.

CLIENT-SERVER STATE SYNC

SignalR hub validation ensures dice rolls and monetary transactions are verified by backend before state commit.

TARGET ROLES

04 // OPEN

- Game Developer Intern
- Fresher Unity Developer
- Unity Gameplay Programmer Intern
- Freelance small Unity game projects

Zen Stack

SOLO UNITY DEVELOPER

TYPE & PLATFORM: Casual physics-based stacking • Android

TECH STACK: Unity

- Implemented physics-based stone stacking, rotation, and balance interactions.
- Built mobile touch controls and responsive gameplay UI for Android.
- Developed an endless gameplay loop with tower-height scoring and local high-score tracking.
- Integrated audio and visual effects, and balanced gameplay feedback.
